AUTHOR Barbett, Samuel F.; And Others
TITLE State Higher Education Profiles, 1988 Edition. A Comparison of State Higher Education Data for FY 1986.
INSTITUTION National Center for Education Statistics (ED), Washington, DC.
REPORT NO CS-88-204
PUB DATE Oct 88
NOTE 899p.; 539 numbered pages are 11 inches high, 8.5 inches wide, requiring 899 microfiche frames.
AVAILABLE FROM Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.
PUB TYPE Statistical Data (110)

EDRS PRICE MF06/PC36 Plus Postage.
DESCRIPTORS College Faculty; Comparative Analysis; Contracts; Degrees (Academic); *Educational Finance; Endowment Funds; *Enrollment Trends; *Expenditures; Federal Aid; Fellowships; Grants; *Higher Education; Income; Library Expenditures; National Surveys; Private Colleges; Public Colleges; Scholarships; *State Aid; Statistical Data; Teacher Salaries; Universities

ABSTRACT

The second edition of this annual profile presents a combination of statistics and indicators concerning national and state involvement, support and performance in higher education. Twelve statistical tables are provided for each state, the District of Columbia and the nation covering enrollment, full-time faculty, revenues, expenditures, and degrees and other formal awards offered. Included are statistical indicators of the status of higher education in a particular sector. The indicators adjust for the size of a sector where size is alternately defined as the number of full-time-equivalent (FTE) students or the number of full-time faculty. Several indicators are also adjusted for the size of the population served. Each state-level statistic is accompanied by an index that is the percentage difference between the state statistic and the national average for the statistic. Chapter 1 presents the national data (FTE enrollments, revenues, expenditures, and degrees awarded, by type and level of institution), and Chapter 2 provides the state ranking tables (FTE enrollment, average faculty salary, revenues, expenditures and appropriations). Chapter 3 presents a statistical profile for each state. Appendix A provides information on sources of data and definition of terms, and Appendix B gives a classification of institutions by state. Foreword

This edition of the *State Higher Education Profiles* (SHEP) is the second edition of the National Center for Education Statistics' annual profile reports on higher education for the Nation, each of the 50 States, and the District of Columbia. It presents a combination of statistics and indicators that can be used to address a myriad of questions relating to State involvement, support, and performance in higher education.

Like the first edition, this report indexes each State statistic to a national average and ranks States on selected statistics. It also relies almost entirely upon data collected by NCES through its Higher Education General Information Survey (HEGIS) and is limited to data for the 1986 fiscal year, the most recent year for which data are available.

SHEP was developed by Center staff after consulting extensively with a working group of State higher education finance officers. As the HEGIS evolves into the Integrated Postsecondary Education Data System (IPEDS) in 1987 and as the National Center for Education Statistics broadens its perspective on postsecondary education through individual-based survey systems, the scope of SHEP will expand in both its coverage of institutions and its statistical content.

In recognition of the responsibility of presenting individual State data and State ranking tables, the introduction suggests several general cautions in the use of the data for comparative purposes and, where applicable, specific caveats are presented for a given State's data. Users should be aware of these qualifiers in interpreting the data.

We hope that anyone with an interest in higher education will find this volume informative and useful. To assure that future editions of *State Higher Education Profiles* will have even greater value for the postsecondary education community, we welcome recommendations for improving the format or analysis.

Samuel S. Peng Director, Postsecondary Education Statistics Division	Roslyn A. Korb Chief, Special Surveys and Analysis Branch

Acknowledgments

Many individuals made significant contributions to SHEP. The authors gratefully acknowledge their efforts. They are as follows:

The State Higher Education Executive Officers (SHEEO)/National Center for Education Statistics (NCES) Network Advisory Committee for Fiscal Year 1986 (including Gary Barnes, North Carolina; Molly Broad, Arizona; C. Gail Norris, Utah; Robert Wallhaus, Illinois; and John Wittstruck, SHEEO/NCES Network), which provided suggestions for the broad content of the report.

An advisory group of current and former State higher education finance officers (composed of Brenda Albright, Tennessee; Dennis Curry, Washington; Edward Grose, West Virginia; Lucie Lapovsky, Maryland; Tom McCord, New York; and John Taylor, New York) took part in the initial detailed planning and design. Lucie Lapovsky and Brenda Albright, along with John Wittstruck, also reviewed the tables and interim drafts and Lucie Lapovsky and John Wittstruck served on the final technical review committee.

In addition, critical technical review was provided by NCES staff members Charles Cowan, Paula Knepper, Mary K. Batcher and Gerald Malitz. Editorial review and publication support was provided by Mark Travaglini and Phil Carr of the Publications Branch of the Office of Information Services. The staff of the General Surveys and Analysis Branch in the Postsecondary Education Statistics Division of NCES supervised the collection and file construction of the 1986 HEGIS data used in this report, Martha L. Hollins and Sharon C. Nelson provided clerical support, and William Freund and Clevie Gladney provided technical consultation for the data processing and presentation.

Introduction

Using the Data

This report offers a comprehensive look at higher education in the United States. It contains 12 statistical tables for each State, the District of Columbia and the Nation covering enrollment, full-time faculty, revenues, expenditures, and degrees and other formal awards conferred. Among these tables are statistical indicators of the status of higher education in a particular sector. The indicators adjust for the size of a sector where size is alternately defined as the number of full-time-equivalent (FTE) students or the number of full-time faculty. Several indicators are also adjusted for the size of the population served, defined as the number of individuals 18 years of age or older. The indicators should help educators gauge higher education from several perspectives.

It must be noted here that the full-time equivalency of part-time students is somewhat problematic in HEGIS since institutions may calculate and report these statistics in several different ways. As a result, the reported full-time equivalency counts may not be comparable either among institutions or among States. (See Appendix A for a full definition of FTE.)

Each State-level statistic is accompanied by an index. The index in the 1988 edition of *SHEP* is the percentage difference between the State statistic and the national average for the statistic. It was calculated by taking the ratio of the difference between the State statistic and the national average to the national average and multiplying it by 100. Thus, when a State statistic is equal to the national average, the index has a value of zero. If a State statistic differs from the national average by 10 percent, the index has a value of (+) or (-) 10, depending on whether the State statistic was higher or lower than the national average. This index has a lower bound of -100 and an unlimited upper bound. States for which a particular statistic was not relevant have an index of -100 for that statistic in the State ranking tables and are listed alphabetically at the bottom of the table. Appendix B, Table B-1 provides a summary of the number of institutions by sector and State and indicates those States which had no institutions in a particular institutional sector. It should also be noted that in the State ranking tables, States with equal indexes were assigned the same rank. Because indexes were rounded to the nearest whole number, States with different ranks but obstensibly equal indexes are an artifact of the rounding convention used.

These indexes put each State's report into a common context and provide a metric on which States can be ordered. State ranking tables present such an ordering by selected statistics. In examining the data for each State, the reader is urged to consider all of a State's data and not just focus on one or another specific measure. The reader is also cautioned not to form conclusions simply from the State's rank in a given table without checking to see if there are explanatory notes preceding the presentation of that State's data which may furnish additional perspective to its rank.

While the indicators adjust for the size of a sector, many other generic factors are not accounted for in this report. Many of these make comparisons among States tenuous at best, particularly for the revenues and expenditures (finance) data. Among these generic factors are geographic price differences, economies of scale, the mix of academic programs in a State, the State's population characteristics, and the wealth of the State—however defined.

Differences among States in accounting practices and funding principles (such as the State's treatment of capital expenditures, retirement-system payments, and student financial aid) also contribute to the problems with interstate comparisons. Even among institutions within States, comparisons may be somewhat tenuous. For example, in some States, doctoral-level institutions with medical schools may report State and local appropriations for indigent patient care as part of their operating (E & G) revenues. This would result in extremely high revenues, particularly on a per-student basis. Prior to release of these data, each State higher education finance officer was asked to review his or her State's data to provide comments that would explain any anomalies in them or that would make the State's data even less comparable to data from other States. Except for editorial changes, these comments appear as received by NCES in the notes preceding presentation of the State's data. They should be read carefully.

Comparisons among different types of institutions—particularly among the 4-year and above and 2-year institutions—should also be approached cautiously since the data collected through NCES' Higher Education General Information Survey (HEGIS) may not reflect one institutional sector as appropriately as another.

To understand the data in this report, the reader should pay special attention to the definitions of specific terms used. (They appear in Appendix A.) Finally, it must be noted that the statistics on higher education in this report are, for the most part, input measures rather than measures of the outcomes of higher education. They represent the result of much planning, numerous deliberations on providing services in light of competing demands for limited resources, and vastly different perspectives on the objectives of higher education and the needs of students. All of these factors must be considered when interpreting the data presented in this report.

The Data and the Approach to the Analysis

This report describes higher education in the 1986 fiscal year (July 1, 1985–June 30, 1986). Although 1986 is the most recent year for which national data on all aspects of higher education are available, it is two years old as of this writing and should be viewed in that context. The data in this report are based almost entirely on information reported to the National Center for Education Statistics through its Higher Education General Information Survey (HEGIS). There are two exceptions to this: the appropriations data in the State ranking tables (Table Y); and the population statistics used to develop indicators (Tables Y, 3, and 8). The source and reliability of these data are presented in Appendix A.

HEGIS collects data on institutional characteristics, enrollment, finance, full-time faculty, and earned degrees and other formal awards. It is a census in that it collects these data on the universe of institutions whose accreditation is recognized by the U.S. Department of Education. While this universe may change from one fiscal year to the next, it is consistent within each fiscal year. The institutional universe for the statistics in this report was a subset of the HEGIS universe. It includes only non-profit institutions in the 50 States and the District of Columbia that are either publicly controlled or privately controlled. Institutions in the HEGIS universe that are operated for-profit (proprietary), U.S. service schools and military academies, and institutions in outlying areas were excluded. The list of institutions included in this report is available in Appendix B by the States in which the institutions are located and by their institutional classification.

The data collected through the HEGIS for any one year represent two distinct time periods. The institutional characteristics, enrollment, and faculty data represent an institution at one point in time, the fall of the school year; the finance and earned degree data cover the entire 12-month period of the fiscal year. Therefore, although fall data are used in conjunction with 12-month data in this report, readers should be cognizant of the differences in time periods covered.

This report presents four types of statistics—actual counts (of individuals or amounts of money), percentage distributions, ratios (means and indicators), and indexes. Counts were arrived at by summing individual institutional reports within type and control of institution. Percentage distributions were calculated by summing institutional level data in the various HEGIS survey component reporting categories then dividing those sums by the totals for a particular type and control of institution. Ratios were calculated by dividing counts of variables (the numerator) by counts of variables (the denominator).

HEGIS requests data on all its components from every institution in the HEGIS universe. As might be expected, however, not all institutions respond to all data requests. As a result, the set of reporting institutions for any one survey component may differ somewhat from the set of reporting institutions for another survey component. That holds true for this report. Counts and percentage distributions are based on a single survey component so that all institutions reporting data (or for whom data could be imputed on that component) were used in the presentation. For ratios that use data from two different HEGIS survey components, only those institutions that had reported data (or imputed data) for both components were used in the analysis. Therefore, the reader may find it problematic to derive the ratios presented in this report from the relevant counts. Appendix A provides a description of the imputation strategy used for each of the HEGIS components.

Chapter One

The National Data

The data presented in the SHEP may be used to address many important issues in higher education. To illustrate their use, this chapter describes the national tables and uses the data to explore some of the major concerns of higher education in the 1980s.

Schools and Students

Tables 1-3 enumerate and describe students in higher education in 1985-86 and the institutions they attend. Table 1 presents the distribution of students by level—undergraduate, graduate, and first-professional—while Table 2 examines their enrollment status in terms of full and part-time attendance. As Table 1 indicates, the vast majority of students in higher education are undergraduates with about a quarter of all undergraduates being first-time freshmen. The proportion of undergraduate students varies widely among different types of institutions. Among institutions that offer at least one graduate degree (master's and doctoral level institutions), the proportion of undergraduate students ranges between 54 percent in private doctoral level institutions with medical schools and 89 percent in public master's level institutions. The distribution of students by level is important because it has been suggested that the costs associated with graduate and first-professional education are significantly higher than the costs associated with providing undergraduate education. Thus, it might be expected that schools with higher proportions of postbaccalureate students would have higher per student costs. This hypothesis will be examined in terms of institutional expenditures as these data are presented in Tables 7 and 9.

Whereas Table 1 describes students in terms of their academic level, Table 2 describes them in terms of their attendance status. Of the total full-time equivalent (FTE) students in higher education, about 80 percent attend school full time, although in private baccalaureate institutions, 90 percent of the FTE students are full time while in public 2-year schools only 60 percent of the total FTE students are full-time attendees.

The number of full-time equivalent (FTE) students is the standard measure of student enrollment in higher education that is generally related to institutional resources. It is not an indicator of the number of students served by higher education institutions, although this number can be approximated from the FTE counts in Table 2 by multiplying the FTE of part-time by three and adding this to the number of full-time students. Carrying out this calculation on the total FTE of part-time students results in a count of 12.4 million students enrolled in higher education in 1986 with approximately 5.5 million students enrolled part time, about 45 percent of the total number of students enrolled. As Table 2 indicates, about half of all part-time students attend public two-year institutions and about 65 percent of the total number of students enrolled in public 2-year institutions are part-time attendees. In fact, part-time attendance is a phenomenon associated primarily with public higher education since private institutions enroll only 16 percent of all part-time students, but account for 26 percent of the total full-time enrollment.

Nationally, public institutions have a very significant role in providing higher education in the U.S., in that they account for over 75 percent of the total FTE and 78 percent of the total number of students enrolled. The proportion of total FTE enrollment accounted for by public higher education varies somewhat by State, however, and by region of the country as State ranking Table A and Figure 1 demonstrate. States in the Northeast tend to have relatively fewer students enrolled in public higher education and States in the West and Southwest tend to have relatively more students enrolled in public schools than the Nation as whole. The proportion of FTE enrollment accounted for by public institutions ranges from 100 percent in Wyoming to only 12 percent in the District of Columbia.

Table 3 indicates the number of higher education institutions in the U.S. and their average size. As may be seen, the distribution of institutions by level of highest degree awarded is quite dependent on its control. For example, 63 percent of all public higher education institutions are 2-year schools, while only 12 percent of private schools limit their awards to less than a baccalaureate degree. The most common type of private institution awards a baccalaureate degree but no graduate degree (38 percent), while this type of school comprises only 5 percent of the public institutions.

The size of an institution seems to vary as a function of the control of the school as well as the level of degree it awards. Higher education institutions in the U. S. have an average FTE enrollment of about 2,800 students; however, only public 2-year institutions approach this average size. Private institutions enroll about half this average number of FTE students while public institutions enroll 50 percent more FTE students than the "average." Among both public and private institutions, doctoral institutions with medical schools are the largest schools and public doctoral institutions with medical schools are over twice as large, on the average, as private schools of the same type. Among institutions that award doctoral degrees, but do not have a medical school, public institutions are almost seven times as large as their private counterparts. As the data indicate, moreover, even the smallest (on the average) public institution tends to be larger than the largest type of private institution except for private doctoral-level institutions with a medical school.

Faculty

Table 4 presents a portrait of full-time instructional faculty in higher education—their number, their average salaries and their rank. There are several points worth noting in Table 4. First, there are substantially more full-time faculty at the higher professorial ranks than at the lower ranks or with no rank at all. This is true for both public and private institutions. In 2-year schools, full-time instructional faculty do not tend to have professorial rank. Secondly, average salaries are highly dependent on rank. Full professors earn about 60 percent more than assistant professors and about 30 percent more than associate professors. Third, the average salary of a full-time faculty member is dependent on the type of school in which he or she is employed—the higher the level of degree awarded by the institution the higher the average salary of full-time faculty of a given rank; salaries in public 2-year institutions are the single exception to this general rule.

It is interesting that the relationships among average salary, rank, and level of institution lose some of their significance in light of the large differences in salary that are due to the State in which the institution is located. State differences tend to reflect differences in the cost of living among States (which may be very substantial) and/or the distribution of faculty by rank within the State. As State ranking Table C indicates, faculty in the State that pays the highest salaries on the average (Alaska) earn 75 percent more than faculty in the State with the lowest average salary (Mississippi), although in 16 States, average faculty salaries are within 5 percent of the national average. Even given the State differences, rank is still an important determinant of salary as State ranking Tables D, E, and F indicate. Full professors in the lowest paying States earn more, on the average, than the national average salary of associate professors, and associate professors in all States earn more than the typical assistant professor when average salaries are compared.

A fourth point worth noting in Table 4 is that, even though faculty on 12-month contracts earn more than those on 9-month contracts, as would be anticipated, the differences in salaries do not seem to reflect the 3-month difference in length of contract. Finally, the distribution of full-time faculty by type and control of institution is a remarkable reflection of the distribution of full-time equivalent students (Figure 2), except with respect to public 2-year institutions. This type of school accounts for 27 percent of the total FTE students but only 20 percent of full-time faculty suggesting, perhaps, that 2-year schools employ an atypically large number of part-time faculty.

Finances

Higher education institutions received over $77 Billion in current operating revenues (education and general—E & G revenues) in 1985-86 (Table 5). State and local governments were the largest source of revenue[1] (42 percent), followed by revenues from tuition and fees (29 percent), the Federal government[2] (12 percent) and private sources[3] (10 percent). Not surprisingly, the funding pattern of public higher education institutions tends to define this overall distribution of revenues, while the funding pattern of private institutions diverges somewhat from it. Private institutions rely most heavily on revenues from tuition and fees (52 percent of total revenues), income from private sources[3] (20 percent), the Federal government[2] (15 percent), and other sources (9 percent). State and local governments[1] provide only about 4 percent of total revenues to private higher education institutions. Moreover, where the proportion of total revenues from tuition and fees in public institutions varies considerably by State (State ranking Table G and Figure 3), ranging from a high of over 40 percent in two states to under 10 percent in 5, State and local appropriations for private institutions are almost nonexistent in most States (Table H). This suggests that public institutions have two major sources of revenues as costs rise (government appropriations and tuition and fees), while private institutions must rely almost entirely on tuition and fees for additional revenues.

It must be noted here, however, that State and local appropriations are not necessarily an adequate reflection of State and local support for either private or public higher education. A great many States provide substantial financial aid to students but this type of assistance is generally perceived and reported by institutions as revenues from tuition and fees.

Table 6 illustrates this circumstance for Federal support of higher education. As it indicates, Federal support of higher education has three components— appropriations, grants and contracts, and student financial aid (exemplified in Table 6 by Pell Grants). Student financial aid accounts for over 20 percent of total Federal support to higher education and for several types of institutions, more than half of Federal support derives from this single type of financial aid to students.

To explore the importance of student financial aid to institutions, it is worthwhile to consider its contribution to institutional revenues even though this analysis is possible only for Federal Pell grants. The tuition and fee revenues displayed in Table 5 contain both student-derived tuition and fees and tuition and fees financed by Pell Grants. When the total dollar amount from Pell Grants (Table 6) is substracted from revenues from tuition and fees, then student-derived tuition and fee revenues account for about 26 percent of total revenues, and Pell grants account for 3 percent of total revenues. From a slightly different perspective, if Pell grants are considered only as contributing to institutional revenues from tuition and fees, they account for about 11 percent of institutional tuition and fee revenues.

For public institutions, Pell grants are about 3.5 percent of total E & G revenues (Tables 5 and 6), whereas for private institutions, Pell Grants are about 2.3 percent of total E & G revenues. As a percentage of tuition and fee revenues, Pell Grants

---

[1] Includes revenues from State and local appropriations and State and local contracts and grants.

[2] Includes revenues from Federal appropriations and Federal grants and contracts.

[3] Includes revenues from private gifts, grants, and contracts, and endowment income.

account for about 20 percent of all public institutions' revenues from this source, but only about 4 percent of all private institutions' tuition and fee revenues.

Institutional expenditures for general operating purposes are displayed in Table 7. In the aggregate, total E & G expenditures are about 96 percent of total E & G revenues. As the distribution of E & G expenditures by function indicates (Table 7), expenditures for instruction make up the lion's share of all expenditures—41 percent of the total, with institutional support, research, and operation and maintenance of plant together accounting for an additional one-third of total E & G expenses.

Higher education has been described as a labor-intensive employment sector in that salaries, particularly faculty salaries, represent a high proportion of total expenditures. The data in Table 7 along with the salary data (for full-time faculty) from Table 4 provide an interesting, albeit incomplete, indicator of the proportion of instructional expenditures that may be accounted for by full-time instructional faculty salaries. Figure 4 depicts total expenditures for full-time faculty salaries by type and control of institution in relation to expenditures for instruction. As may be seen, full-time faculty salaries comprise only 22 percent of instructional expenditures in private doctoral level institutions with medical schools and 56 percent of instructional expenditures in public master's level institutions. (It must be noted here, however, that the HEGIS faculty salary survey specifically excludes salaries for clinical staff in medical schools.) In 2-year schools that have a disproportionately small number of full-time faculty relative to their student population, the proportion of instructional expenditures for full-time faculty is comparable to other types of schools that are under the same control (i.e., public or private).

A comparison of expenditure patterns for public and private institutions suggests that public institutions spend about 7 percent more of their total E & G expenditures for instruction than privates, but private institutions spend about 7 percent more on scholarships and fellowships. There are slight variations between public and private institutions on several other expenditure functions as well, but in all cases, these differences are less than 4 percent.

Within the public and private sectors, the proportional allocation of expenditures for instruction varies only slightly by type of institution. In the public sector, 2-year schools spend half of their total E & G expenditures on instruction whereas doctoral level schools with medical schools spend about 39 percent of their total E & G expenditures for instruction—a difference of 11 percent. Among private institutions, the range of the proportional allocation of expenditures for instruction is less than 5 percent. It is interesting also that among States there is considerable homogeneity on this statistic as well (Table L and Figures 5A and 5B). Although public institutions allocate from about 32 percent to almost half of their total E & G expenditures to instruction, public schools in half the States are within 5 percent of the National average (Table L). Among private institutions in each of the States, the average proportion of E & G expenditures allocated to instruction has an extremely broad range (from 11 to 49 percent). Again, however, private institutions in 31 States are within 10 percent of the National average on this statistic (Figure 5B).

With respect to the proportion of total E & G expenditures that is spent on scholarships and grants, the range among public institutions is quite narrow— 2.2 percent in 2-year to 3.9 percent in baccalaureate level schools. Among private institutions, this range is somewhat greater, with a high of almost 15 percent in baccalaureate level schools and a low of 8 percent in doctoral level schools with medical programs.

Perhaps of greater interest than differences in the distribution of expenditures between public and private institutions, are the differences among types of institutions. As has been noted, allocations for instruction are fairly consistent among different types of institutions within the public and private sectors. However, among the various types of institutions the expenditures for research are basically confined to doctoral level institutions, and the proportion of total E & G expenditures for student services and institutional support tends to drop as the level of degree awarded by the institution increases. Additionally, the relatively high proportion of expenditures for public service in doctoral institutions with medical schools may be a result of indigent patient care that hospitals associated with medical schools provide.

Tables 8 and 9 and Figures 6, 7, 8, and 9 present a somewhat different picture of institutional revenues and expenditures than the proportional distributions of Tables 5 and 7 suggest. That's because selected sources of revenues (Table 8) and selected functions of expenditures (Table 9) have been adjusted for the size of the institution, defined either in terms of the number of FTE students or the number of full-time instructional faculty.

Table 8 contains selected sources of institutional revenues on a per-student basis. By summing across the per-student entries in Table 8 (not including revenues per student from Pell grants), a total revenue per FTE student can be obtained. This total revenue value—total selected revenues per FTE student— differs from total E & G revenues in that revenues per FTE student from auxiliary exterprises (such as dormitories, bookstores, athletics) are included, but revenues from State and local grants and contracts and from "other" sources have been excluded. Auxiliary enterprises are generally self-supporting activities (institutions spend as much on these activities as they earn) and adding revenues from this source does not change the total picture of institutional per-student revenues but does provide greater insights into per-student "costs" for higher education. As is indicated by Table 8, students provide two sources of revenues—tuition and fees revenues and revenues from auxiliary enterprises. Across all institutions, total per-student revenues from these two sources average $3,805. Since Pell Grants are awarded to students to help pay for tuition and fees and living expenses, the average Pell Grant ($282) may be subtracted from this total to obtain a very rough estimate of the total selected per student revenues actually derived from students, about $3,523 or about 38 percent of the amount of the selected per student revenues in Table 8. Public support for higher education, in the form of appropriations, also contributes $3,602 or 38 percent to the total selected per-student revenues, while income from private sources (endowment income and private gifts, grants and contracts) contributes $872 or about 9 percent. In this analysis, Pell Grants account for about 3 percent of total selected per-student revenues.

Figure 6 depicts the total selected revenues per FTE student by type and control of institution. As it suggests, the average revenues received by higher education institutions is about $9,300 per FTE student (including $8,007 in selected E & G revenues and $1,210 in revenues from auxiliary enterprises per FTE student), with public institutions receiving about $4,300 less per FTE student than private institutions. Additionally, a differential in revenues between public and private institutions is apparent among the various levels of schools, with private institutions having consistently higher revenues per FTE student than public institutions of the same type.

In terms of total E & G revenues per FTE student, Figure 7 displays the proportional contribution from various sources to total per-student E & G revenues. As may be seen, government appropriations (Federal, State, and local) and other sources—primarily governmental grants and contracts— constitute over 75 percent of a public institution's total per student E & G revenues. When Pell grants are added in as a governmental source of revenues, over 80 percent of per-student revenues come from a governmental source. Among private institutions, student-derived tuition and fees and private sources of revenues comprise about 70 percent of the total per-student E & G revenues.

Among public institutions, the contribution to total E & G revenues per FTE student from student-derived tuition and fees is only 12 percent in both 2-year schools and doctoral-level schools with a medical school. In 2-year publics, government sources, particularly State and local government appropriations (69 percent) and Pell Grants (6 percent), are relatively large components of total E & G per-student revenues. In public doctoral-level schools with medical schools, private and "other" sources assume more importance in total E & G per-student revenues. Among private institutions, student-derived tuition and fee revenues comprise almost two-thirds of total per-student E & G revenues in master's level institutions and about 60 percent of total E & G revenues in 2-year, baccalaureate, and doctoral level schools with no medical school. Only in private doctoral level institutions with medical schools do student-derived tuition and fee revenues account for less than 60 percent of total E & G per-student revenues. In these schools, however, the per FTE student dollar amount of E & G revenues from student-derived tuition and fees is the highest among all types and controls of institutions—40 percent higher than for the type of institution with the next highest dollar amount of student-derived tuition and fees and 400 percent higher than for peer institutions in the public sector.

Table 8 also presents revenues from Federal grants and contracts per full-time faculty member. As may be seen, this average varies considerably by type of institution and as State ranking Table Q and Figure 8 indicate, it also varies considerably by State for institutions in the public sector. Since Federal grants and contacts are usually awarded for some specific purpose (e.g. research, instruction, curriculum development, that generally would be carried out by faculty), it is interesting to examine the average amount received per full-time faculty from Federal grants and contracts in conjunction with average salaries paid to full-time faculty members and in comparison to institutional expenditures for research per full-time faculty member (Figure 9).

These comparisons suggest that in schools with significant research expenditures (i.e. doctoral-level institutions), revenues from Federal grants and contracts per full-time faculty member either exceed or represent extremely high proportions of the average salary paid to a faculty member. Additionally, in almost all types of institutions (except for public 4-year doctoral institutions) the average amount per full-time faculty spent by the institution for research is less than the amount received from the Federal government for grants and contracts (this includes the 5 percent of total Pell amounts received by the institution for Pell grant administration, but does not include Pell grant awards to students). This suggests, perhaps, that grant and contract revenues provided to institutions by the Federal government are not necessarily targeted for research.

Institutional expenditures per FTE student and per full-time faculty member by selected expenditure functions are presented in Table 9. From it, it is obvious that, on the whole, private institutions spend more per FTE student on instruction than do publics. This holds true for all types of institutions except for 2-year schools. When institutions are ordered on instructional expenditures per FTE student, it is also evident that the higher the level of degree awarded by the institution, the more is spent per FTE student on instruction. That is, doctoral level institutions with a medical school spend more on instruction per FTE student than doctoral level institutions with no medical school, and so on. This is consistent with the expectation noted previously, that instructional "costs" for schools with large proportions of graduate and first-professional student would be higher. However, when institutions are ordered on the proportion of total E & G expenditures they allocate to instruction (Table 7), private institutions tend to allocate a smaller proportion of their total expenditures to instruction than do publics, and doctoral level schools also tend to allocate proportionately less to instruction.

Of interest also is the variation in expenditures for instruction per FTE student that occurs among the States. As Table T and Figures 10A and 10B indicate, there is very little variation in the public sector on this parameter, but substantial variation in the private sector. Nationally, public institutions spend about $3,300 per FTE student on instruction. Public institutions in 47 of the 51 entities (50 States and the District of Columbia) spend within $900 of the national average for public schools and, in over half the States, public institutions spend within 10 percent of this national average. On the other hand, the range of expenditures for instruction per FTE student among private institutions by State is almost $10,000 (Table T). Moreover, private institutions in only 6 of the 50 States that have private higher education spend within 10 percent of the national average expenditure for private institutions ($4,300). Private institutions in many of the States spend considerably less on instruction per FTE student than the national average for all private institutions. In fact, in 18 States, private school expenditures for instruction per FTE student are at least 30 percent

lower than the national private school average. Furthermore, while on a national basis private institutions spend more on instruction per FTE student than public institutions, on a State-by-State basis, private institutions in 15 of the States spend less on instruction per FTE student than do their public counterparts in those States with the lowest average expenditure for this indicator.

In addition to instruction, other institutional expenditures are directly related to providing students with educationally related services. These include expenditures for academic support, libraries, student services and institutional support. When expenditures per FTE student for these functions (Table 9) are combined it would appear that higher education institutions spend almost $2,600 per FTE student on these functions, or about 75 percent of the amount spent on instruction on a per student basis.

Table 9 also includes expenditures per FTE student for scholarships and fellowships. Pell grant expenditures have been eliminated from this value so that the figures here include only "other" Federal grant aid, State grant aid and institutional grant aid. While it is not clear how expenditures for scholarships and grants are related to institutional revenues from tuition and fees, it is noteworthy that on a per FTE student basis, higher education institutions' expenditures for scholarship and grants are about 18 percent of their revenues from tuition and fees.

Outputs

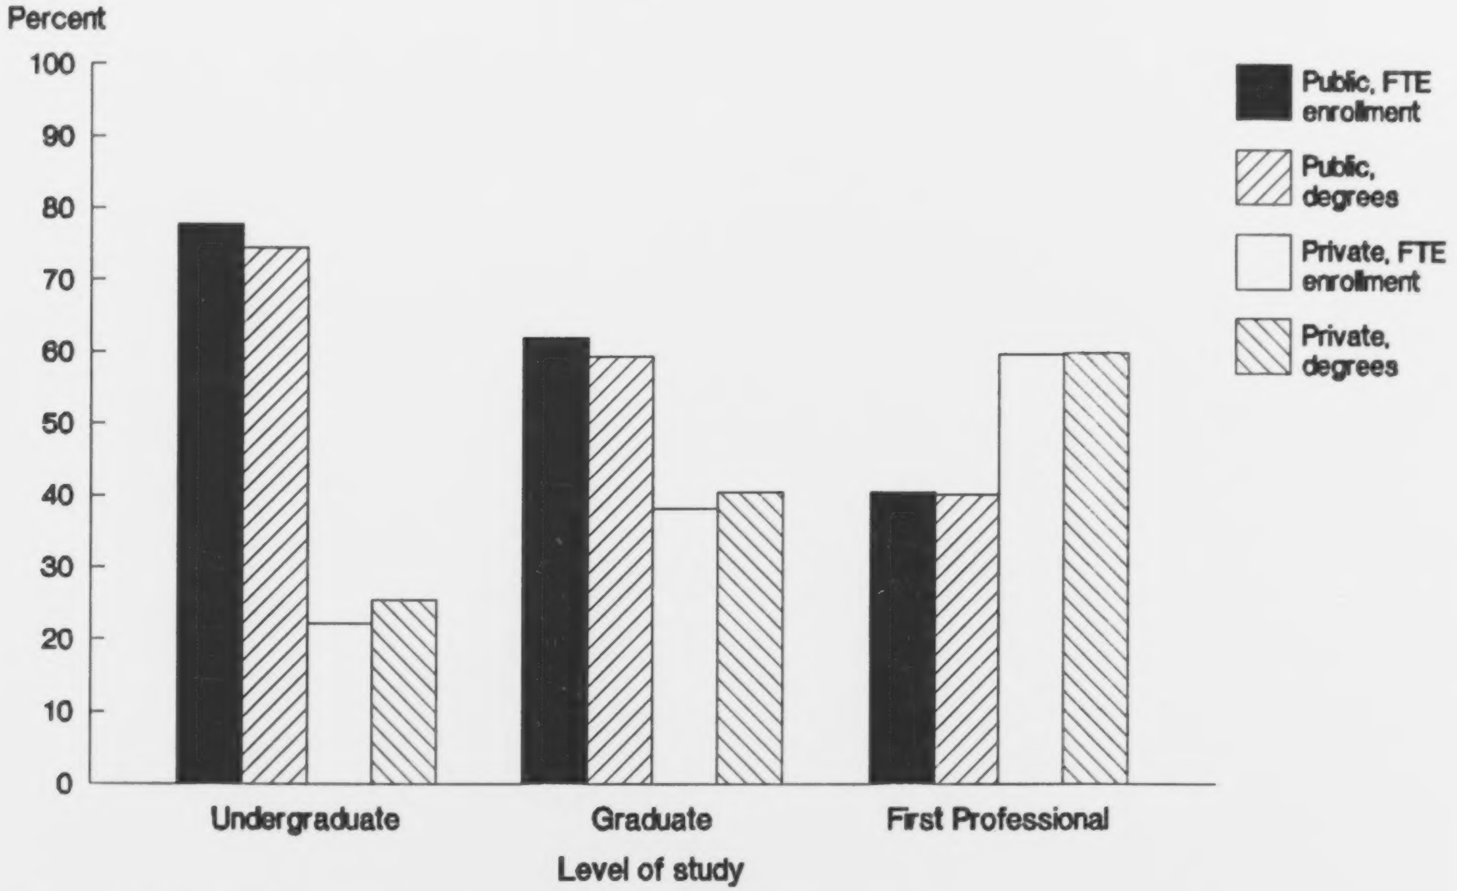
As the finance data indicate, higher education institutions have multiple sources of revenues and multiple functions of expenditures that reflect several distinct missions. Unquestionably, however, the major function of higher education institutions is education and their primary output the individuals who complete programs and earn degrees. Tables 10-12 show the number of degrees awarded in academic year 1985-86 by level of degree, field of study, and control of institution. In that year, higher education institutions awarded over 1.9 million degrees, of which 28 percent were sub-baccalaureate, 51 percent were bachelor's, 15 percent were master's, 2 percent were doctoral, and 4 percent were first-professional degrees.

Figure 11 indicates the proportion of degrees awarded by public and private institutions in terms of the level of the degree and compares this to the proportion of FTE students enrolled by each institutional sector at the undergraduate, graduate, and first-professional levels. As the figure indicates, there is an almost exact correspondence in the distributions of FTE enrollments by level and degrees awarded by level among public and private institutions. The very small differences between the proportions of FTE students and degrees awarded at the undergraduate and graduate levels in both the public and private sectors may be a reflection of the fact that public institutions tend to enroll more part-time students than do private institutions.

Tables 10-12 also provide information on the fields in which degrees at each level were awarded. As the tables suggest, most degrees were awarded in a very few subject areas at each level of degree award. For example, 64 percent of sub-baccalaureate degrees were awarded in three fields (business, health, and liberal or general studies); 59 percent of bachelor's degrees were awarded in five fields (business, education, engineering, health, and the social sciences); almost half of the master's degrees were awarded in business and education; and over half the doctor's degrees were awarded in education, engineering, the life sciences and the physical sciences. At the first-professional level, medicine and law comprised almost 70 percent of total degrees awarded.

Tables 10-12 also demonstrate that the same fields are dominant at each degree level irrespective of the control of the institution, although the proportion of degrees awarded in these dominant fields does vary somewhat between public and private institutions. For example, private institutions award a higher proportion of sub-baccalaureate degrees in business and a smaller proportion of degrees in liberal or general studies than do their public counterparts. Similarly, public institutions award almost a third of their master's degrees in education whereas private schools award a third of their master's degrees in business. At the doctoral level, public institutions award a higher proportion of their degrees in education and private institutions award a relatively high proportion of their doctoral degrees in psychology, philosophy, religion and theology. Law is the single largest degree program at the first-professional level for both public and private schools, but the proportion of medical degrees awarded by public institutions is more than twice as high as the proportion awarded in the private sector. Private institutions award a relatively high proportion of first-professional degrees in theology—a field of study that is not generally offered by public institutions.

Figure 11.--Percentage distribution of FTE enrollment and degrees awarded, by control of institution and by level of study



Note.--Undergraduate degrees include associate and bachelor's degrees.
Graduate degrees include master's and doctoral degrees.

Arkansas

The reader is advised of the following conditions reported by Arkansas about its data.

1. Finance data include the teaching hospital of the University of Arkansas Medical Sciences Campus and indigent care for the teaching hospital. Applicable to the public doctoral with medical sector for Tables 5, 6, 7, 8, and 9.

2. Finance data include the System Administration, the Agricultural Experiment Station, the Cooperative Extension Service, the Archaeological Survey, and the Graduate Institute of Technology of the University of Arkansas Main Campus. Applicable to the public doctoral without medical sector for Tables 5, 6, 7, 8, and 9.

California

The reader is advised of the following conditions reported by California about its data.

Data for San Diego State and San Francisco State are included with public doctoral without medical level institutions. However, the doctoral programs for these two institutions were jointly administered with the University of California. San Diego State and San Francisco State are not traditionally considered doctoral level institutions. Applicable to the public doctoral without medical sector for Tables 1 through 9.

California

Colorado

The reader is advised of the following conditions reported by Colorado about its data.

Tuition and fee revenues reflect a large number of out-of-state students paying out-of-state tuition. Applicable to the public sector for Tables 5 and 8.

The State legislature provides no general fund appropriations for out-of-state students. Applicable to the public sector for Tables 5 and 8.

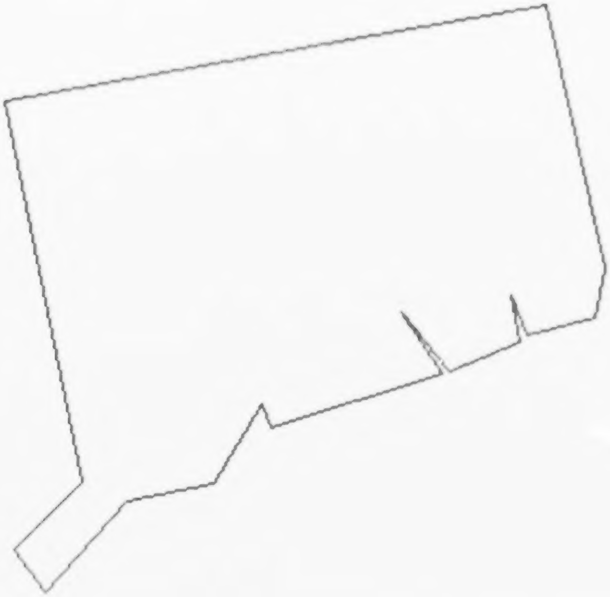
Connecticut



The reader is advised of the following conditions reported by Connecticut about its data.

Expenditures from general fund appropriations do not include fringe benefit expenses. These costs are paid by another State agency. Also does not include expenses of the central administrative offices of State universities, regional community colleges, and State technical colleges. Applicable to the public sector for Tables 7 and 9.

Connecticut

Delaware

245

The reader is advised of the following conditions reported by Delaware about its data.

The high percentage of out-of-state students enrolled at the University of Delaware distorts, for interstate comparisons, the ratio of tuition and fees revenue to State and local government appropriations. Applicable to the public doctoral without medical sector for Tables 5 and 8.

Delaware

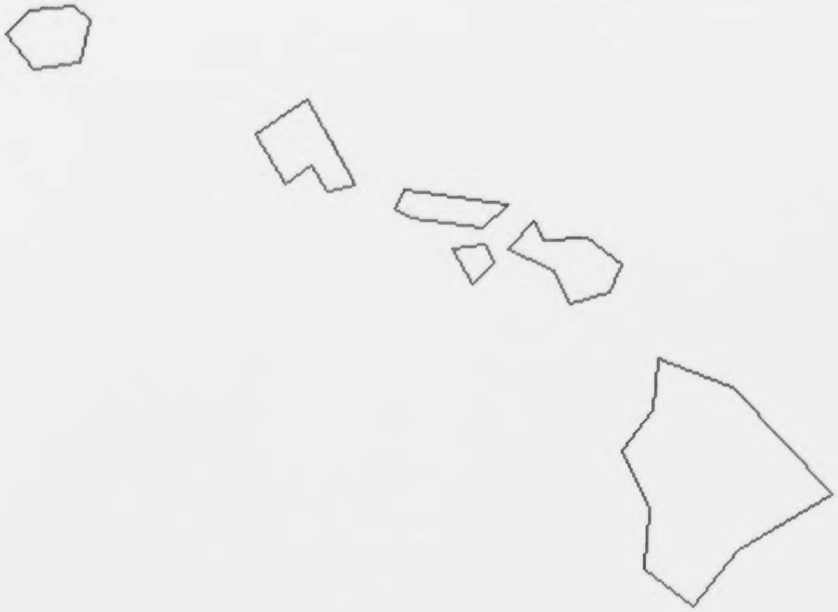
Hawaii



The reader is advised of the following conditions reported by Hawaii about its data.

Public institutions deposit tuition revenues into the State general fund for reallocation. Revenues listed under tuition and fees in public institutions represent revenues from fees only. Revenues from State and local government appropriations include actual appropriations and the reallocated tuition revenues. Applicable to the public sector for Tables 5 and 8.

Illinois

The reader is advised of the following conditions reported by Illinois about its data.

1. Those doing trend analysis should note that the data for public 2-year institutions excludes the Chicago Urban Skills Institute. Applicable to the public 2-year sector for Tables 1 through 9.

2. Tuition and fees revenue is initially deposited in the State Income Fund and then appropriated to the public 4-year and above institutions. Applicable to the public 4-year and above sector for Tables 5 and 8.

3. Includes institutional support expenditures for the University of Illinois Central Administration, although central office expenditures for three other public systems in Illinois are not included. Applicable to the public doctoral with medical sector for Tables 7 and 9.

4. Revenues do not include funds appropriated in FY 1986 to other State agencies for unemployment insurance, workmen's compensation, and health and life insurance of higher education employees. In other States, these funds are included in higher education appropriations. Applicable to the public sector for Tables 5 and 8.

Illinois

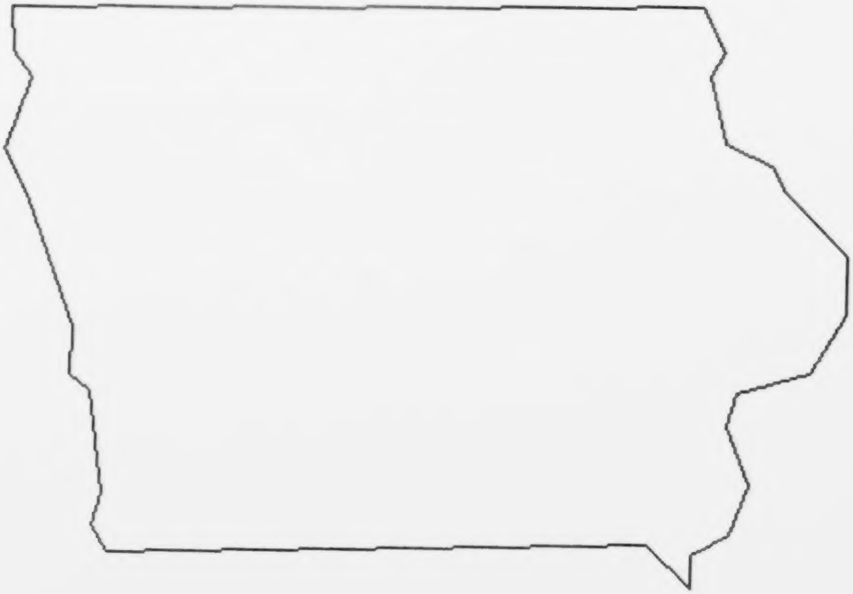
Iowa



The reader is advised of the following conditions reported by Iowa about its data.

Legally, the State considers Ellsworth Community College and Marshalltown Community College District as the two campuses of the Iowa Valley Community College District, although they are reported to HEGIS separately and have been included separately in this report. Applicable to the public 2-year sector for Table 3.

Kentucky

The reader is advised of the following conditions reported by Kentucky about its data.

Revenues from state and local government appropriations include the following: appropriations for medical and dental services provided by the health science centers at the University of Kentucky and the University of Louisville; funds for the Higher Education Desegregation Plan; appropriations for land grant institutions' agriculture research and public service activities; and appropriations for other research activities. These revenues total approximately $115.6 million. The inclusion of these revenues which are not directly related to student instruction significantly overstate Kentucky's State government appropriation per FTE student. Applicable to the public sector for Tables 5 and 8.

Kentucky

Fall Enrollment 1985

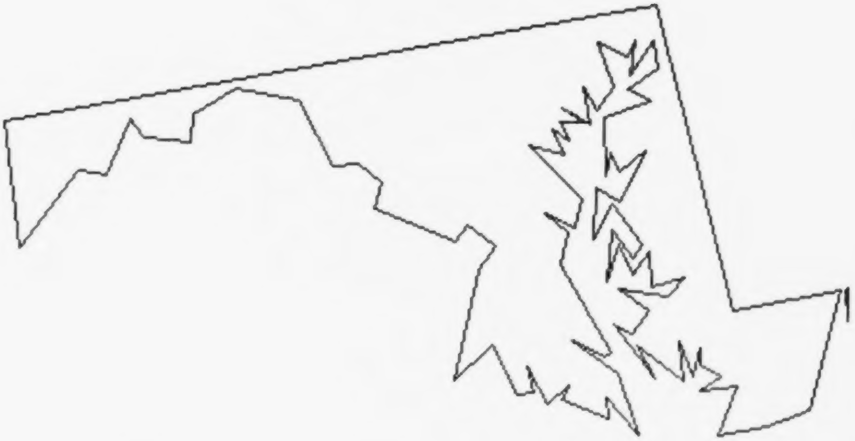
Maryland



The reader is advised of the following conditions reported by Maryland about its data.

The University of Maryland University College, included in the public masters sector of Tables 1 through 9, has a worldwide program and receives no State appropriations. The enrollment (Tables 1, 2, and 3), degree (Tables 10, 11, and 12), and faculty (Table 4) data in this report reflect only that portion of the University College program offered in Maryland. The expenditures (Table 7), revenues (Tables 5 and 6), and financial indicators (Tables 8 and 9) data include data from the entire worldwide operation of the University College. This results in a significant overstatement of expenditures and revenues per student at public master's level institutions in Maryland.

Individuals who need further information about the Maryland data should contact Lucie Lapovsky at the State Board for Higher Education, 16 Francis Street, Annapolis, Maryland 21401.

Michigan

The reader is advised of the following conditions reported by Michigan about its data.

State and local government appropriations include $33.2 million in Table 5 earmarked for the Cooperation Extension and the Agricultural Experiment Station at Michigan State University. These revenues do not fund student activities and inflate the revenues per FTE student in Table 8 for public 4-year doctoral with medical institutions. Applicable to the public 4-year doctoral with medical sector for Tables 5 and 8.

Michigan

Minnesota

460

The reader is advised of the following conditions reported by Minnesota about its data.

1. This category excludes 27 postsecondary technical institutes in Minnesota that enrolled approximately 34,000 full-time equivalent students during FY 1986. Applicable to the public 2-year sector for Tables 1 and 2.

2. This category excludes 27 postsecondary technical institutes in Minnesota that enrolled approximately 34,000 full-time equivalent students during FY 1986. Due to this exclusion, comparisons on a per capita basis are inappropriate. Applicable to the public 2-year sector for Table 3.

3. This category excludes 27 postsecondary technical institutes in Minnesota that employed approximately 2,000 full-time equivalent faculty during FY 1986. Applicable to the public 2-year sector for Table 4.

4. This category excludes 27 postsecondary technical institutes in Minnesota that had approximately $180 million in revenues during FY 1986. Applicable to the public 2-year sector for Tables 5 and 7.

5. This category excludes 27 postsecondary technical institutes in Minnesota that had approximately $12 million in Federal revenues during FY 1986. Applicable to the public 2-year sector for Table 6.

6. This category excludes 27 postsecondary technical institutes in Minnesota that had approximately $180 million in revenues, enrolled approximately 34,000 full-time equivalent students, and employed approximately 2,000 full-time equivalent faculty during FY 1986. Due to these exclusions, comparisons on a per capita basis are inappropriate. Applicable to the public 2-year sector for Table 8.

7. This category excludes 27 postsecondary technical institutes in Minnesota that had approximately $180 million in expenditures, enrolled approximately 34,000 full-time equivalent students, and employed approximately 2,000 full-time equivalent faculty during FY 1986. Applicable to the public 2-year sector for Table 9.

8. This category excludes 27 postsecondary technical institutes in Minnesota. Over one-half of these institutes now offer, or have plans to offer, associate degrees. Applicable to the public 2-year sector for Table 11.

New York

The reader is advised of the following conditions reported by New York about its data.

Educational and general mandatory transfers may be understated because the City University 4-year and 2-year colleges and the State University (SUNY) community colleges did not report capital debt service on the HEGIS form. Applicable to the public sector for Table 7.

New York

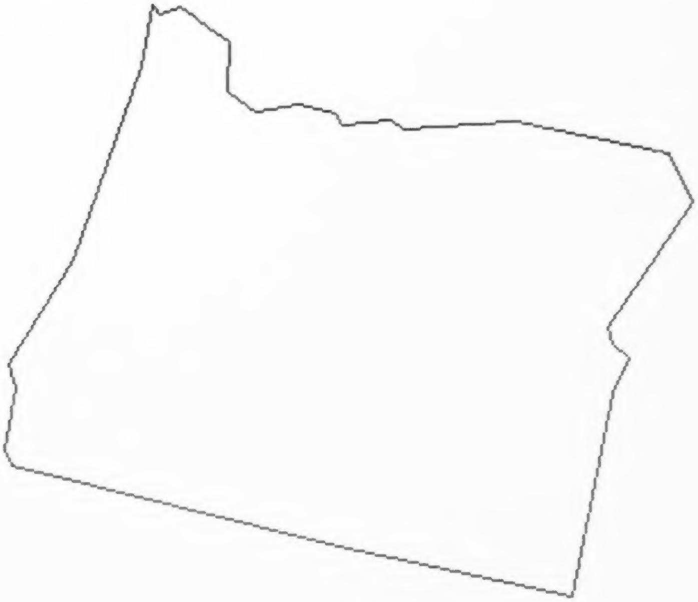
Oregon



644

The reader is advised of the following conditions reported by Oregon about its data.

1. Data for Oregon State University are included with public doctoral with medical level institutions because of Oregon State's veterinary medicine program. However, that program is a cooperative one with Washington State University. The medical part of the program is at Washington State. The Oregon State students are sent to Washington State for that part of the program. Applicable to the public doctoral with medical sector for Tables 1 through 9.

2. Oregon State colleges and universities and public community colleges report, for the three categories of average salary, the employee's contribution to the retirement system as a fringe benefit and not as salary. For comparative purposes, Oregon's salary data for the public colleges should be adjusted upward by 6 percent. Applicable to the public sector for Table 4.

Oregon

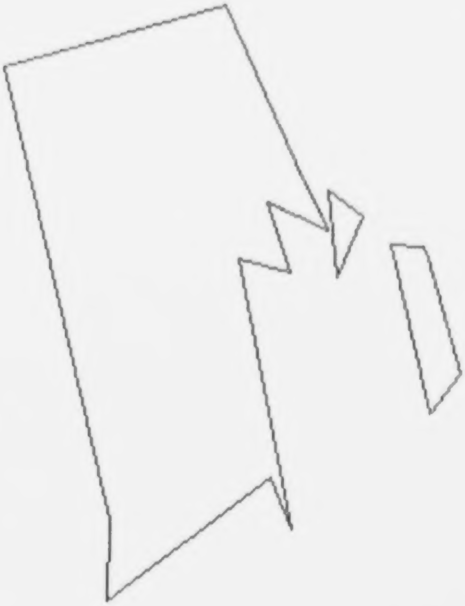
Rhode Island



The reader is advised of the following conditions reported by Rhode Island about its data.

Roger Williams College in Bristol, Rhode Island, has a small branch campus in Providence. Both campuses filled out separate forms for all of the HEGIS surveys involved and submitted the forms independently to the National Center for Education Statistics. As a result, Roger Williams College was counted as two institutions rather than one. That affected the data for number and mean size of institutions. Applicable to the private baccalaureate sector of Table 3.

Rhode Island

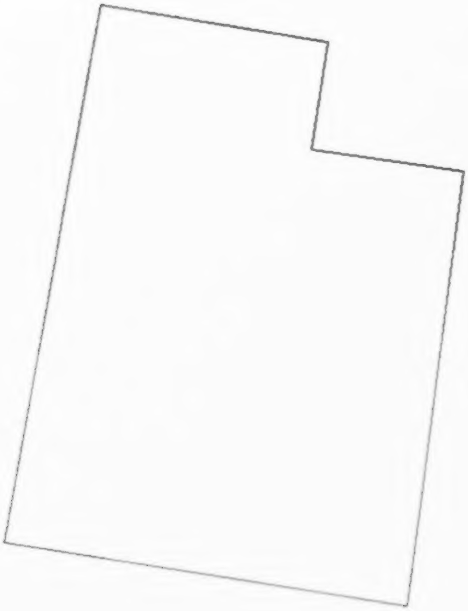
Utah



The reader is advised of the following conditions reported by Utah about its data.

1. Enrollment data are under-reported in the public doctoral without medical sector for Tables 1, 2, 3, 8, and 9.

2. Financial data and related calculations are omitted for the private doctoral without medical sector. The only Utah institution in this sector is Brigham Young University, which has never responded to the HEGIS financial survey. This is a change from 1985 when imputed data were used for Brigham Young. Applicable to the private doctoral without medical sector for Tables 5,6,7,8, and 9.

Utah

Fall Enrollment 1985

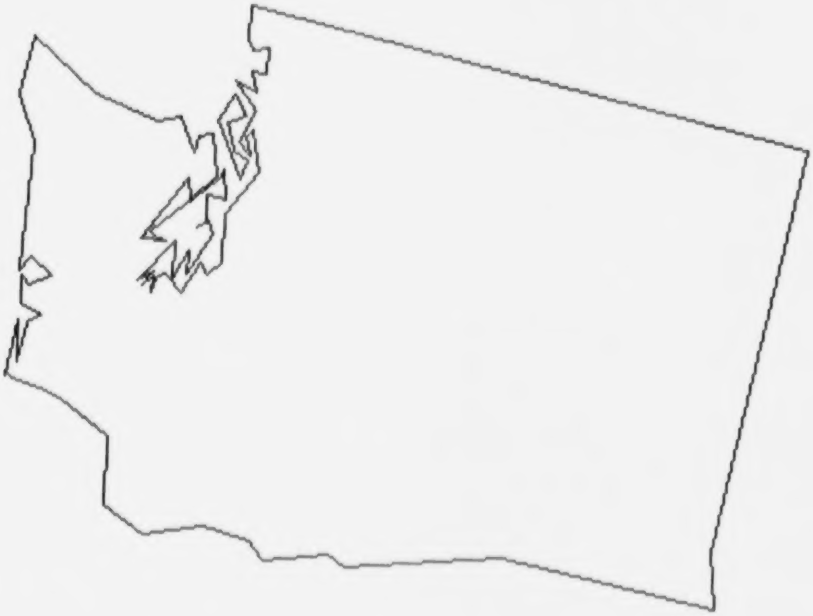
Washington



The reader is advised of the following conditions reported by Washington about its data.

1. All faculty of the State community college system technically have no academi rank and are reported under "Other." It appears that a few community co reported a total of 116 professors with an average salary of $28,011. For consistency, these figures should be included in the "Other" category. Applicable to the public 2-year sector for Table 4 (9-month contract).

2. Tuition and fees revenues are collected by the State and reallocated through State appropriations. Applicable to the public sector for Tables 5 and 8.

Appendix A

Sources of Data and Definitions of Terms

830

Appropriations Data (Table Y)

Source: Center for Higher Education, College of Education, Illinois State University. *Grapevine* summary tables for 1986, 1987, and 1988, Normal, Illinois.

Description of survey and methodology. Data were collected for sums of State appropriated (not expended) funds from tax dollars for annual operating expenses of higher education immediately after legislative appropriations were enacted for each of the States.

Data were collected for sums appropriated for 1) Statewide coordinating boards or governing boards (for board expenses or for allocation by the board to other institutions, or both); 2) State aid to local public community colleges; 3) operation of State-supported community colleges; 4) operation of vocational technical 2-year colleges or institutions which are predominantly for high school graduates and adult students; 5) higher education, but appropriated to another State agency (Examples: funds for faculty fringe benefits may be appropriated to the State Treasurer and disbursed by that office; certain funds for medical and health education for disbursement from there); 6) State scholarships or other student financial aid; and 7) private institutions of higher education at all levels. Excluded were appropriations for capital outlays and debt service; and appropriations of sums derived from Federal sources, student fees, auxiliary enterprises, and other non-tax sources.

The survey form was sent to a higher education fiscal agency in each of the 50 States. Reports were received from all of the States for the 1985-86, 1986-87, and 1987-88 surveys.

The FY 1985-86 figures are based upon revisions received from the States as of December 1, 1987; the FY 1986-87 figures are based upon revisions received as of November 1, 1987.

Source: U.S. Bureau of the Census, *Current Population Reports, Series P-25. No. 998, State Population and Household Estimates to 1985, With Age and Components of Change*, U.S. Government Printing Office, Washington, D.C., 1986. See pages 7 through 10.

Definition of terms

Appropriations of State tax funds for operating expenses of higher education. See above explanation of data collected under "description of survey and methodology."

Index (Table Y). The percentage difference between the State statistic and the national average for the statistic. The index was calculated by taking the ratio of the difference between the State statistic and the national average to the national average and multiplying that ratio by 100.

Per capita (Table Y). The total population of individuals in a State 18 years of age and older divided by 1,000.

Degrees and Other Formal Awards Conferred 1985-86

(Tables 10, 11, and 12)

Source: NCES. *HEGIS XXI: Degrees and Other Formal Awards Conferred Between July 1, 1985 and June 30, 1986.* Washington, D.C.: NCES, 1985.

Description of survey and methodology. Data were collected on the number of postsecondary certificates for programs of less than 1 year, postsecondary certificates for programs of 1 but less than 4 years, associate's degrees, bachelor's degrees, master's degrees, doctor's degrees, and first-professional degrees conferred by institutions of higher education. The universe included 3,355 institutions of higher education and 33 rabbinical schools which do not confer formal awards. The survey form was sent to 3,388 institutions of higher education and their branches. Reports were received from 3,108 institutions—a response rate of 92.6 percent. Imputations were made for an additional 205 nonrespondent institutions based upon their responses to the 1984-85 survey. The remaining 42 institutions could not be imputed because the institutions were new to the HEGIS universe in 1984-85 or 1985-86 and did not respond to either survey. Those institutions are included on the file with "zero" degrees.

Definition of Terms

Bachelor's degree (Table 10). Normally requires at least 4 but not more than 5 years of full-time college-level work. Includes all bachelor's degrees conferred in a cooperative or work-study plan or program. Includes bachelor's degrees in which the normal 4 years of work is completed in 3 years.

Control of institution (Tables 10, 11, and 12). See definition on page 503.

Degrees of 4 or more years (Table 10). Includes earned certificates or diplomas below the baccalaureate, as well as associate's, bachelor's, doctor's, and first-professional degrees.

Doctor's degree (Table 10). The doctor's degree classification includes such degrees as Doctor of Education, Doctor of Juridical Science, Doctor of Public Health, and the Ph.D. Degree in any field whether Agronomy, Food Technology, Education, Engineering, Public Administration, Ophthalmology, Radiology, etc.

Field of study (based upon the program codes provided in *A Classification of Instructional Programs*, NCES, 1981, Washington, D.C.), (Tables 10, 11, and 12).

Agriculture (Tables 10 and 11). Includes *Classification of Instructional Programs* (CIP) 2-digit program codes 01 (Agribusiness and Agricultural Production), 02 (Agricultural Science), 03 (Renewable Natural Resources) and 31 (Parks and Recreation).

All Other (Table 10). Includes CIP 2-digit program codes 04 (Architecture and Environmental Design), 05 (Area and Ethnic Studies), 12 (Consumer, Personal, and Miscellaneous Services), 21 (Industrial Arts), 22 (Law), 24 (Liberal /General Studies), 25 (Library and Archival Sciences), 28 (Military Sciences), 29 (Military Technologies), 30 (Multi/Interdisciplinary Studies), 32 (Basic Skills), 33 (Citizenship/Civic Activities), 34 (Health-Related Activities), 35 (Interpersonal Skills), 36 (Leisure and Recreational Activities), 37 (Personal Awareness), 41 (Science Technologies), 46 (Construction Trades), 47 (Mechanics and Repairers), 48 (Precision Production), and 49 (Transportation and Material Moving).

All Other (Table 11). Includes CIP 2-digit program codes 04 (Architecture and Environmental Design), 05 (Area and Ethnic Studies), 12 (Consumer, Personal, and Miscellaneous Services), 16 (Foreign Languages), 21 (Industrial Arts), 22 (Law), 23(Letters), 25 (Library and Archival Sciences), 26 (Life Sciences), 27 (Mathematics), 28 (Military Sciences), 29 (Military Technologies), 30 (Multi/Interdisciplinary Studies), 32 (Basic Skills), 37 (Personal Awareness), 38 (Philosophy and Religion), 39 (Theology), 40 (Physical Sciences), 41 (Science Technologies), and 42 (Psychology).

Business (Tables 10 and 11). Includes CIP 2-digit program codes 06 (Business and Management), 07 (Business and Office), and 08 (Marketing and Distribution).

Chiropractic (Table 12). Includes CIP 6-digit program code 18.0301 (Chiropractic).

Communications (Tables 10 and 11). Includes CIP 2-digit program codes 09 (Communications) and 10 (Communication Technologies).

Computer and Information Sciences (Tables 10 and 11). Includes CIP 2-digit program code 11 (Computer and Information Sciences).

Dentistry (Table 12). Includes CIP 6-digit program code 18.0401 (Dentistry, General).

Education (Tables 10 and 11). Includes CIP 2-digit program code 13 (Education).

Engineering (Tables 10 and 11). Includes CIP 2-digit program codes 14 (Engineering) and 15 (Engineering and Engineering-Related Technologies).

Foreign Languages (Table 10). Includes CIP 2-digit program code 16 (Foreign Languages).

Health (Tables 10 and 11). Includes CIP 2-digit program codes 17 (Allied Health) and 18 (Health Sciences).

Home Economics (Tables 10 and 11). Includes CIP 2-digit program codes 19 (Home Economics) and 20 (Vocational Home Economics).

Law (Table 12). Includes CIP 6-digit program code 22.0101 (Law).

Letters (Table 10). Includes CIP 2-digit program code 23 (Letters).

Liberal (General Studies) (Table 11). Includes CIP 2-digit program code 24 (Liberal/General Studies).

Life Sciences (Table 10). Includes CIP 2-digit program code 26 (Life Sciences).

Medicine, General (Table 12). Includes CIP 6-digit program code 18.1001 (Medicine, General).

Optometry (Table 12). Includes CIP 6-digit program code 18.1201 (Optometry).

Osteopathic Medicine (Table 12). Includes CIP 6-digit program code 18.1301 (Osteopathic Medicine).

Other (Table 12). Includes CIP 6-digit program code 80.9999 (Specify: The "Other" category is used for first-professional degrees within the 10 professions other than those specifically named in connection with those professions).

Pharmacy (Table 12). Includes CIP 6-digit program code 18.1401 (Pharmacy).

Philosophy and Religion (Table 10). Includes CIP 2-digit program codes 38 (Philosophy and Religion) and 39 (Theology).

Physical Sciences (Table 10). Includes CIP 2-digit program code 40 (Physical Sciences).

Podiatry (Table 12). Includes CIP 6-digit program code 18.1501 (Podiatry).

Psychology (Table 10). Includes CIP 2-digit program code 42 (Psychology).

Public Affairs and Protective Services (Tables 10 and 11). Includes CIP 2-digit program codes 43 (Protective Services) and 44 (Public Affairs).

Social Sciences (Table 10). Includes CIP 2-digit program code 45 (Social Sciences).

Theological Studies (Table 12). Includes CIP 6-digit program code 39.0601 (Theological Studies).

Trade and Industrial (Table 11). Includes CIP 2-digit program codes 46 (Construction Trades), 47 (Mechanics and Repairs), 48 (Precision Production) and 49 (Transportation and Material Moving).

Veterinary Medicine (Table 12). Includes CIP 6-digit program code 18.2401 (Veterinary Medicine).

Visual and Performing Arts (Tables 11 and 12). Includes CIP 2-digit program code 50 (Visual and Performing Arts).

First-professional degrees (Table 12). See definition on page 497.

Index (Tables 10, 11, and 12). See definition on page 493.

Less than 4-year degrees (Table 11).

a) **Postsecondary certificate or diploma** (less than 1 year). A program that would be completed in less than 1 academic year (2 semesters or 3 quarters) by a student enrolled full time, as fulltime is defined by the reporting institution, regardless of how long the student has attended the institution;

b) **Postsecondary certificate or diploma** (1 but less than 4 years). A program that takes more than 1 academic year by a student enrolled full time, institutionally defined, and in which the completer did not receive, nor is eligible for, an associate's degree or a bachelor's degree;

c) **Associate's degree.** A degree normally given after at least 2 but less than 4 years of full-time college work.

Master's degree (Table 10). The master's degree in liberal arts and sciences is the degree customarily granted upon successful completion of at least 1 but not more than 2 full-time academic years of work beyond the bachelor's degree.

Private (Tables 10, 11, and 12). See definition on page 503.

Public (Tables 10, 11, and 12). See definition on page 503.

Expenditures 1985-86

(Table 7)

Source: NCES, *HEGIS XXI: Financial Statistics of Institutions of Higher Education for Fiscal Year 1986.* Washington, D.C.: NCES, 1986.

Description of survey and methodology. Data for FY 1986 educational and general expenditures by function were collected from every 2- and 4-year institution of higher education in the HEGIS universe. The survey form was sent to 3,388 institutions of higher education and their branches. Reports were received from 2,939 institutions—a response rate of 86.7 percent. Imputations were made for an additional 399 nonrespondent institutions based upon their responses to the FY 1985 survey. The remaining 50 schools could not be imputed because they were new to the HEGIS universe in 1984-85 or 1985-86 and did not respond to either survey.

Definition of terms

Academic support. Includes expenditures for the support services that are an integral part of an institution's primary missions of instruction, research, or public services. Includes expenditures for museums, galleries, audiovisual services, academic computing support, ancillary support, academic administration and personnel development, and course and curriculum development.

Control and level of institution. See definition on page 503.

Educational and general (E&G) expenditures. Educational and general expenditures include current fund expenditures for instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and educational and general mandatory transfers. Educational and general expenditures exclude expenditures for auxiliary enterprises, hospitals, and independent operations. Pell grants are excluded.

Educational and general (E&G) mandatory transfers. Mandatory transfers from current funds are those that must be made in order to fulfill a binding legal obligation of the institution. Includes mandatory debt-service provisions relating to academic and administrative buildings including amounts set aside for debt retirement and interest; and required provisions for renewal and replacements to the extent they are not financed from other sources.

Index. See definition on page 493.

Institutional support. Includes expenditures for the day-to-day operational support of the institution (except expenditures for physical plant operations). Also includes expenditures for administrative services, executive direction and planning, legal and fiscal operations, and community relations.

Instruction. Includes instruction expenditures of the colleges, schools, departments, and other instructional divisions of the institution; and expenditures for departmental research and public service that are not separately budgeted. Also includes expenditures for both credit and noncredit activities. Excludes expenditures for academic administration where the primary function is administration (for example, academic deans). This category includes the following: general academic instruction; occupational and vocational instruction; special-session instruction; community education; preparatory and adult basic education; and remedial and tutorial instruction conducted by the teaching faculty for the institution's students.

Libraries. Includes current operating expenditures for libraries. Does not include capital expenditures.

Operation and maintenance of plant. Includes all expenditures for operations established to provide service and maintenance related to campus grounds and facilities used for educational and general purposes. Does not include expenditures made from the institutional plant funds accounts.

Public service. Includes all funds budgeted specifically for public service and expended for activities established primarily to provide noninstructional services that are beneficial to groups external to the institution. Examples are seminars and projects provided to particular sectors of the community. Also includes expenditures for community services and cooperative extension services.

Research. Includes all funds expended for activities specifically organized to produce research outcomes and commissioned by an agency either external to the institution or separately budgeted by an organizational unit within the institution. Does not include nonresearch projects (such as training programs).

Scholarships and fellowships. This category applies only to moneys given in the form of outright grants and trainee stipends to individuals enrolled in formal coursework, either for credit or not. Aid to students in the form of tuition or fee remissions is included. Excludes those remissions which are granted because of faculty or staff status. These are charged to staff benefits. Does not include College Work Study program expenses. Pell Grants are included for this report.

Student services. Includes funds expended for admissions, registrar activities, and activities whose primary purpose is to contribute to students' emotional and physical well-being and to their intellectual, cultural and social development outside the context of the formal instruction program. Examples are career guidance, counseling, financial aid administration, student health services (except when operated as a self-supporting auxiliary enterprise). Includes the administrative allowance for Pell Grants.

Faculty 1985-86 (Table 4)

Source: NCES, *HEGIS XX: Salaries, Tenure, and Fringe Benefits of Full-time Instructional Faculty, 1985-86.* Washington, D.C.: NCES, 1985.

Description of survey and methodology. Data were collected on instructional faculty employed (including those under contract but not in the payroll system) by higher education institutions as of October 1, 1985. Only full-time instructional faculty on 9- and 12-month salary contracts are included in the survey. The survey form was sent to 3,388 institutions of higher education and their branches. Reports were received from 2,952 institutions—a response rate of 87 percent. Salary data omitted by respondents were not imputed. No data of any kind were imputed for the 436 nonrespondents to the survey because of significant changes made in the forms in the recent past (1984-85).

Definition of terms

Academic rank (assistant professor, associate professor, professor, and other). The academic ranks of assistant professor, associate professor, and professor are defined by the institutions. "Other" includes instructors, lecturers, and faculty with no academic rank as defined, again, by the institutions.

Control and level of institution. See definition on page 503.

Full-time faculty. Defined as those instructional members of the Instruction/Research staff who are employed full time (definition supplied by the institution) and whose major regular assignment is instruction, including those with released time for research. Instructional faculty on sabbatical leave are reported at their regular salaries, even though the faculty member may be receiving a reduced annuity while on leave. Replacements for those on sabbatical leave and on faculty leave without pay are not included. Full-time replacements for those on leave without pay are included. Chairmen of departments are reported (if they have no other administrative title and hold a faculty rank) at their contracted faculty salary.

Index. See definition on page 493.

Length of contract (9-month and 12-month). Salaries of faculty are reported on either a 9-month or a 12-month basis. Faculty are reported as having 9-month or 12-month salaries on the basis of their contract period, not on the basis of the number of installments in which salaries are paid. The term "9-month salary" applies to faculty who teach for two semesters, three quarters, two trimesters, two 4-month sessions or the equivalent. The term "12-month salary" applies to faculty employed for the entire year. These faculty are usually employed for 11 months of teaching with one month of vacation.

Fall Enrollment 1985 (Tables 1, 2, and 3)

Source: NCES, *HEGIS XX: Fall Enrollment in Institutions of Higher Education, 1985.* Washington, D.C.: NCES, 1985.

Description of survey and methodology. Data were collected for full-time and part-time enrollment in the fall of 1985 by student attendance status, sex, and type and control of institution. The survey form was sent to 3,388 institutions of higher education and their branches. Reports were received from 3,130 institutions—a response rate of 92 percent. Imputations were made for an additional 227 nonrespondent institutions based upon their most recent response to the survey. The remaining 31 schools could not be imputed because they had not responded previously.

Source: U.S. Bureau of the Census, *Current Population Reports, Series P-25, No. 998, State Population and Household Estimates to 1985, With Age and Components of Change*, U.S. Government Printing Office, Washington, D.C., 1986. See pages 7 through 10.

Definition of terms

Control and level of institution (Tables 1, 2, and 3). See definition on page 503.

Enrollment level (Table 1). Includes undergraduate, first-professional, graduate, and unclassified students.

First-professional (Table 1). Students enrolled in a professional school or program which requires at least 2 academic years of college work for entrance and a total of at least 6 years for a degree. Includes only students in first-professional degree programs in the field of chiropractic, dentistry, law, medicine (general), optometry, osteopathic medicine, pharmacy, podiatry, theological studies, and veterinary medicine. (See definitions of these program codes in *A Classification of Instructional Programs,* NCES, 1981, Washington, D.C.). Students in programs requiring only 4 or 5 years beyond high school are reported as undergraduates.

First-time freshman (Table 1). Entering freshmen who have not previously attended any college. Includes students enrolled in the fall term who attended college for the first time in the summer of 1984. Also includes students who entered with advanced standing (college credits earned before graduation from high school) at the freshman level.

Full-time enrollment (Table 2). Those students whose academic load (course work or other required activity) is at least 75 percent of the institution's normal full-time load.

Full-time equivalent (FTE) enrollment (Tables 1, 2, and 3). FTE enrollment figures are based on the number of full-time students plus an FTE of part-time students as reported by institutions. (For institutions that do not report the FTE of part-time students, FTE is calculated by dividing the number of part-time students by three).

Full-time equivalent (FTE) of part-time enrollment (Table 2). Part-time students were converted by data providers into full-time equivalents by one of the following methods:

(1) Use of a method already employed in the institution of the data provider to compute FTEs for some other purpose;

(2) An institution data provider could have totaled the credit hours for part-time students and divided by the normal full-time credit-hour load. The normal full-time credit-hour load was usually determined by dividing the total number of credits required for completing a program by the institutionally defined length of program in terms, or by the number of terms required of a fully engaged student to obtain such credits. Data providers were advised that FTE of part-time students was *not* the minimum number of credit hours required for a student to be classified full time (75 percent of a normal full-time load). Therefore, the institution data providers divided by the normal full-time load, not by the minimum full-time load. For most institutions, this figure was 15 credit-hours (not 12); and

(3) Institutions (data providers) were advised, also, that they could assign a fractional value of full time to each part-time student, appropriate to the institution, such as 1/4, or 1/2. A student taking 3/4 (75 percent) or more of a normal full-time load could be classified as a full-time student.

Graduate student (Table 1). Students who hold the bachelor's or first-professional degree, or equivalent, and are working toward an advanced degree.

Index (Tables 1, 2, and 3). See definition on page 493.

Mean size of institutions (Table 3). Mean size of the institutions is the total enrollment in a sector divided by the number of institutions reporting enrollment in that sector.

Other (Table 1). First-year students who entered the institution before the summer of 1985, and second-year, third-year and fourth-year and beyond students.

Per 1000 capita (Table 3). See definition on page 493.

Postbaccalaureate (Table 1). Includes first-professional and graduate students.

Unclassified (Table 1). Undergraduate and postbaccalaureate level students who are not candidates for a degree or other formal award, although taking courses for credit in regular classes with other students.

Undergraduate level. Includes, but is not limited to, undergraduates who cannot be classified by class standing; for example, new transfer students. Includes students who already have bachelor's degrees or awards below the baccalaureate degree who are taking courses at the same level or lower. Included also are "special students" and teachers taking additional undergraduate courses for certification.

Postbaccalaureate level. Includes, but is not limited to, "special" and other students taking first-professional or graduate courses but who are not working toward a degree.

First-professional students. See definition on page 497.

Undergraduate (Table 1). Students enrolled in a 4- or 5-year bachelor's degree program, in an associate degree program, or in a vocational or technical program that is normally terminal and results in formal recognition below the baccalaureate degree.

Definition of terms

Academic support (Table 9). See definition on page 495.

Control and level of institution (Tables 8 and 9). See definition on page 503.

Federal Government appropriations (Table 8). See definition on page 500.

Federal Government grants and contracts (Table 8). See definition on page 500.

Full-time equivalent (FTE) student (Tables 8 and 9). See definition on page 498.

Full-time faculty (Tables 8 and 9). See definition on page 497.

Income from private sources. (Table 8). Combines income from private gifts, grants and contracts with endowment income. (See page 500 for definitions of private gifts, grants and contracts, and page 499 for definition of endowment income.)

Index (Table 8 and 9). See definition on page 493.

Institutional support (Table 9). See definition on page 496.

Instruction (Table 9). See definition on page 496.

Libraries (Table 9). See definition on page 496.

Pell Grant (Table 9). Includes the amount of Pell Grants disbursed by institutions.

Per 1000 capita (Table 8). See definition on page 493.

Research (Table 9). See definition on page 496.

Sales and services of auxiliary enterprises (Table 8). Includes all revenues generated by the auxiliary enterprise operations of the institution. Auxiliary enterprises are managed as essentially self-supporting activities. Examples are residence halls, food services, student health services, college unions, college stores, barber shops, etc.

Scholarships and fellowships (Table 9). See definition on page 496.

State and local government appropriations (Tables 8). See definition on page 500.

Student services (Table 9). See definition on page 496.

Tuition and fees (Table 8). See definition on page 500.

Revenues 1985-86 (Tables 5 and 6)

Source: NCES, *HEGIS XXI: Financial Statistics of Institutions of Higher Education for Fiscal Year 1986.* Washington, D.C.: NCES, 1986.

Description of survey and methodology. See description on page 495.

Definition of terms

Control and level of institution (Tables 5 and 6), See definition on page 503.

Educational and general (E&G) revenues (Table 5). Consists of current funds revenues from Federal, State, and local appropriations; tuition income; government grants and contracts; private gifts, grants, and endowment income; sales and services of educational activities; and other revenues. Excluded from E&G revenues are income from sales and services of auxiliary enterprises, sales and services of hospitals, independent operations, and revenues for capital purposes. E&G funds include only those funds intended for operating purposes. Pell Grants are excluded.

Endowment income (Table 5). Includes the unrestricted income of endowment and similar funds; restricted income of endowment and similar funds to the extent expended for current operating purposes; and income from funds held in trust by others under irrevocable trusts. Does not include capital gains or losses. Such gains when spent for current operations are treated as transfers, not revenues.

Federal Government appropriations (Tables 5 and 6). Includes dollars appropriated or made available by the Federal Government to public or private institutions of higher education for current operating expenses and not for specific projects or programs. Examples are Federal land-grant appropriations and Federal revenue sharing funds. Federal appropriations received through State channels are included in the total for Federal appropriations. Federal grants and contracts are excluded.

Federal Government grants and contracts (Tables 5 and 6). Includes revenues from Federal agencies that are for specific research projects or other types of programs such as administrative allowances for student aid. Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a Government grant or contract. Includes indirect costs recovered. Pell Grants are excluded.

Index (Tables 8 and 9). See definition on page 493.

Other (Table 5). Includes sales and services of educational activities and revenues derived from the sales of goods or services that are incidental to the conduct of instruction, research, or public service. Examples include film rentals, scientific and literary publications, testing services, university presses, and dairy products. Also includes all items or revenues not covered elsewhere. Examples are interest income and gains (net of losses) from investments of unrestricted current funds. Includes revenues resulting from the sales and services of internal service departments to persons or agencies external to the institution (e.g., the sale of computer time).

Pell Grants (Table 6). Includes the amount of Pell Grants disbursed by institutions.

Private gifts, grants and contracts (Table 5). Private gifts and grants include revenues from private donors for which no legal consideration is involved. Private contracts include those funds for which specific goods and services must be provided to the funder as stipulation for receipt of the funds. Includes only those gifts, grants, and contracts that are directly related to instruction, research, or public service. Monies received as a result of gifts, grants, or contracts from a foreign government are included, as well as the estimated dollar amount of contributed services.

State and local government appropriations (Table 5). Dollars appropriated or made available by State and local governments to public or private institutions of higher education for current operating expenses and not for specific projects or programs. Grants and contracts are excluded. Charges for room, board, and other services rendered by auxiliary enterprises are not included here.

State and local government grants and contracts (Table 5). Includes revenues from State and local government agencies which are for specific research projects or other types of programs such as student aid. Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a government grant or contract. Includes indirect costs recovered.

Tuition and fees (Table 5). All tuition and mandatory fees assessed against students for current operating purposes. Includes tuition and fee remissions or exemptions even when there is no intention of collecting from the student. Includes those tuitions and fees that are remitted to the State as an offset to the State appropriation. Charges for room, board, and other services rendered by auxiliary enterprises are not included.

Appendix B

Institutional Classifications and Listings by State

847

Institutional Classifications Used In This Report:

Control of institution

Public. Includes all higher education institutions under the control of—or affiliated with—Federal, State, local, State and local, or State-related agencies.

Private. Includes all higher education institutions under the control of—or affiliated with—nonprofit, independent organizations with no religious affiliation; or nonprofit organizations with a religious affiliation (including Catholic, Jewish, Protestant, or other).

Level of institution

4-year and above includes the following categories:

Doctoral. Any institution that awarded a doctoral degree or first-professional degree during academic year 1985-86. First-professional degree programs include chiropractor, dentistry, law, medicine, optometry, osteopathy, pharmacy, podiatry, theology, and veterinary medicine.

Doctoral with medical. Any doctoral institution that awarded a degree in dentistry, medicine, osteopathy, or veterinary medicine during academic year 1985-86.

Doctoral without medical. Any doctoral institution that did not award a medical degree (see above) during academic year 1985-86.

Master's. Any institution that awarded postbaccalaureate degrees or certificates below the doctorate during academic year 1985-86 (includes masters degrees, postbaccalaureate certificates, and postmasters certificates).

Baccalaureate. Any institution whose highest degree awarded in academic year 1985-86 was a baccalaureate degree.

2-year. Any institution that awarded an associate's degree, a certificate, or diploma in a program of less than four years in length during academic year 1985-86.

Institutions which do not grant degrees are classified based upon the length of the longest program offered (e.g., institutions offering programs of four years and less than four years are classified respectively as 4-year and 2-year institutions).

The list that follows includes all campuses used in this report by institutional classification and State. The States are shown in alphabetical order. The institutions listed include all campuses that reported data for the HEGIS Institutional Characteristics Survey to NCES in 1985.
